DETAILED ACTION

Response to Amendment

1. The amendment was received on September 5, 2006.

Response to Arguments

2. Applicant's arguments, see Remarks on pages 13-15, filed on September 5, 2006 have been fully considered and are persuasive. The rejection has been withdrawn.

Allowable Subject Matter

3. Claims 1-3, 5-12 and 14-20 are allowed and re-numbered to 1-18.
4. The following is an examiner's statement of reasons for allowance:

The instant invention defines a method of contrast matching a first image and a second image. The claimed invention distinguishes over the prior art by the manner in which the adjusted image is formed having a contrast that better match the contrast of the first image as viewed on a monitor. The claimed combination allows for improving a method of contrast matching a first image and a second image. Contrast matching is conventional in the art. However, the prior art of record fails to teach operating a controller to generate an image ratio of said first image and said second image, wherein said image ratio has a numerator representing said first image and a denominator representing said second image, operating said controller to regularize said image ratio by adding a constant to said denominator to form a regularized image ratio, operating said controller to filter said regularized image ratio to form a filtered ratio; and operating said controller to multiply said second image by said filtered ratio to form an adjusted image having a contrast that better matches the contrast of said first image as viewed on a monitor. These elements in combination with all of the other elements of the claims are not taught or fairly suggested in the prior art of record. The dependent claims 2-3, 5-9, 11-12, 14-17 and 19-20 are allowed for the same reasons.
